

SUPPLY CHAIN INTELLIGENCE

SC VISIBILITY SERVICES

WHAT IS SUPPLY CHAIN INTELLIGENCE?

Supply chain visibility is the ability to track and monitor products and goods as they move through your supply chain. A simple goal, yet less than 10% of companies claim to have an end-to-end view of their supply chain. **Why?** We believe this is because most organizations approach supply chain visibility as a technology problem--when it is really a cultural one.

Only 6% of companies report full visibility of their supply chains. **69% state they need to improve.**
Source: 2023 Zippia Research

Cultural challenges translate into siloed data with different owners and different translations. Attempting to build a unified view of this data without tackling the underlying organizational issues leads to project failures.

Our **Supply Chain Intelligence Services** were designed with these challenges in mind. Built on industry best practices and refined with each engagement we complete; SCi from NCS Partners incorporates our learnings to provide exceptional clarity and intelligent visibility direction for each of our customers.

WHY Choose NCS Partners for Supply Chain Intelligence (SCi)?

NCS Partners has been a trusted advisor to global companies for more than 20 years. Our SCi offering works with all supply chain constituents to build a high-quality, timely, and reliable unified view of your supply chain data that is used to optimize decision-making.

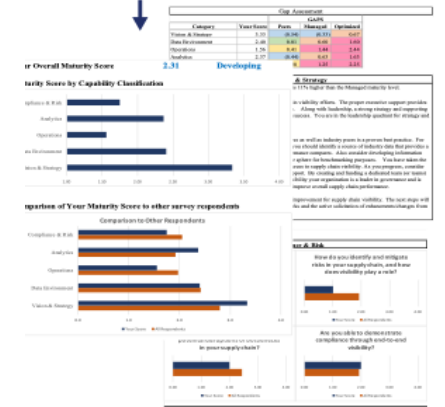

We start via an assessment-led approach to each service engagement, beginning with our Supply Chain Visibility Maturity Assessment which provides organizations with analytics on how they measure against peers and best practices.

Our 15 minute survey measures your organization's position in each of our 5 Key Supply Chain visibility disciplines.

Your survey results are delivered via email in a private, personalized and comprehensive report and will reveal how your organization compares to others in the SC data maturity curve.

The **database also provides invaluable information** regarding best practices and the state of supply visibility across multiple industries.

Visibility is what you need. Intelligence is what we deliver.

NCSP End-to-End Supply Chain Intelligence

Visibility & Strategic Solutions

NCS leverages survey-based assessments to guide each of our tailored SCi services. These in-depth assessments help structure workshops and interviews that are laser-focused on your organization's highest priorities.

Our **Supply Chain Intelligence Services** are supported by our **SPEAR** design principles which align our work products with your organization's key objectives, KPI's and metrics. SPEAR ensures the continuity and evolution of our services.

Strategic Planning Services

The **SCi Visibility Roadmap** services build on your organization's business needs and industry best practices to create a set of prioritized programs and projects.

We incorporate **Sustainability and ESG** into each engagement. We provide a Sustainability and ESG Strategy service for organizations that need to establish vision and direction.

The **SCi Data Assessment Service** provides a comprehensive review of your organization's supply chain data environment. NCS Partners benchmark your data architecture and usage patterns

Design Services

The **SCi Data Repository Services** assist you in the design, platform selection (if appropriate), development and deployment of a supply chain data repository.

The **SCi Analytics Services** work with business users and IT professionals to define the data ecosystem, reporting, and analytic needed to meet business goals.

Our **SCi Systems Integration Services** assist in the building or deployment of solutions needed to support your supply chain needs. Whether a new forecasting engine, data integration layer, or other supply chain analytics platform, NCS Partners delivers solutions from experience and expertise.
