

BUILDING CUSTOM RPA SOLUTIONS

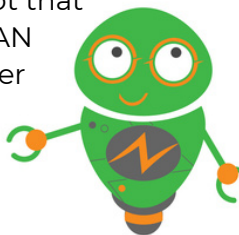

Simple, Nimble and Affordable Platform Agnostic Bots that help humans do almost anything.

NUTAN CAPABILITIES

System agnostic, nuTAN connects to other applications systems, data/file types, and browsers.

- **Data Authentication** – nuTAN provides a simple interface to connect a bot to a targeted set of data sources. nuTAN also supports best practices for writing audit files as part data extraction and update.
- **Error Checking** – nuTAN bots can verify data accuracy ensuring the bot doesn't take action on faulty data.
- **Application flexibility** – nuTAN bots can interact directly with web browsers, application front-ends, and emulators. nuTAN bots support screen spying to ensure data elements are in place to extract or input data.
- **Reporting & Analytics** – nuTAN captures all bot actions automatically. These audit logs can be used to produce powerful analytics to highlight opportunities for improvement and to fine-tune bot actions.
- **Bot structure** – nuTAN supports the building and connecting of granular-level bots to assemble modular process scenarios. For example, a complete process could require data extraction, data validation, data cleanup and audit, transaction entry, and a summary report. Each of these macro steps could be a separate bot that could be reused for other processes. nuTAN supports bot-to-bot flows enabling quicker debugging, easier maintenance, while promoting reusability.

OVERVIEW

Every business is different. Even companies using the same software follow different processes, have different interfaces, and varying timelines.

nuTAN provides an easy-to-use interface that allows organizations to quickly build and deploy their own custom bots for their specific use cases.

CHALLENGES...SORT OF

nuTAN deploys quickly and is easy-to-use, so you don't need to be an IT specialist to create a custom solution for your company...

BUT, if you have a detailed situation or don't have time, we offer development, launch support...data analytics and testing too!

BUSINESS DIFFERENCE

Customized bots can help with tedious human tasks. nuTAN was built originally as a test automation platform. Our experts have leveraged nuTAN for numerous Fortune 500 companies to save human power, provide speed, agility, and deliver cost-saving accuracy to support divisions across each company. nuTAN was developed to be quick to learn, easy to use, nimble in application, and affordable for everyone.

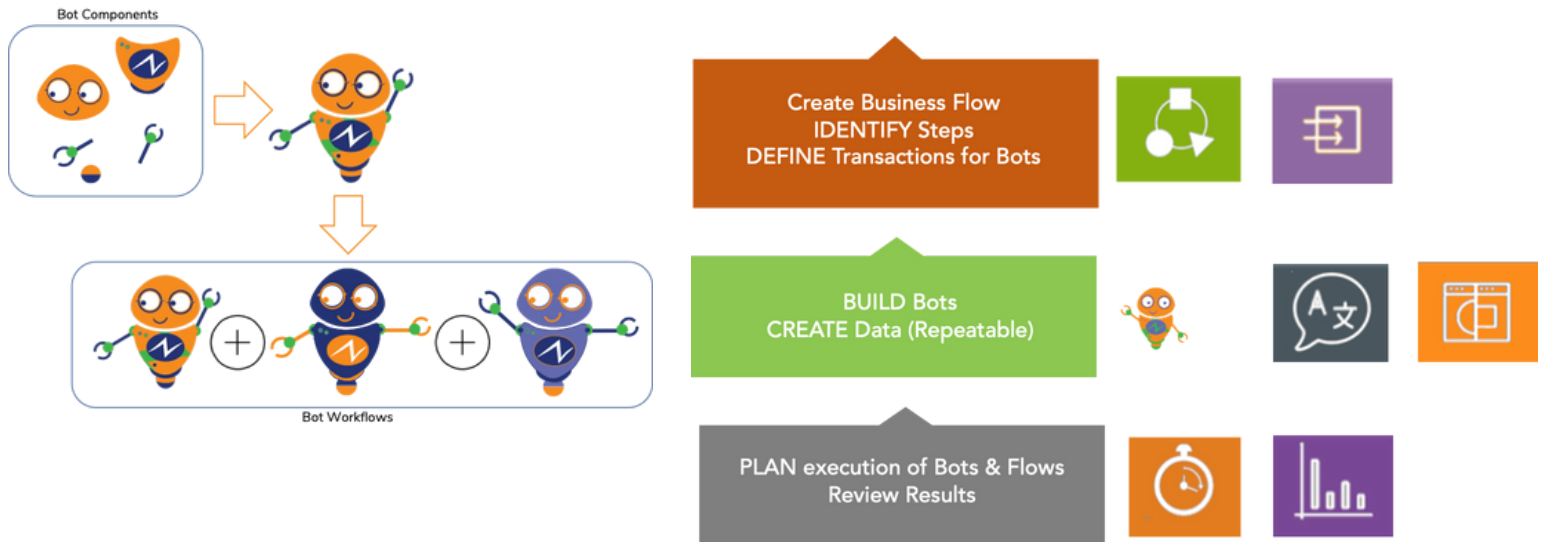

SIMPLE & NIMBLE BUILDING A CUSTOM BOT

Define your tasks, set the rules and let's get started....

Choosing an RPA tool can be intimidating.

Do you really need all those features? Does having extra feature save you extra money? Or, do you need a straight-forward scalable, platform-agnostic software that can be up and running with a customized set of bots in days.

That's the nuTAN value-advantage. With options for personal concierge guidance, or "DIY" installation, we promise it doesn't take an IT Guy to control this solution.

VALUE SOLUTION

- nuTAN provides the tools to enable organizations to rapidly build and deploy automated RPA bots to solve a wide variety of use cases.
- nuTAN bots are system agnostic and can be easily integrated with most applications and data sources. nuTAN bots can be started manually from the nuTAN console, scheduled from the nuTAN scheduler, or invoked via APIs.
- nuTAN bots can be grouped or clustered to automate an entire workflow, from data collection to transaction processing.

*A nuTAN bot saved our client nearly \$200,000 in a single year.
Imagine what nuTAN could do for you...*

"For over 11 years, NCS Partners has been improving supply chains and troubleshooting challenges for Global companies and Fortune 500 businesses. We have developed other productions... and our most recent, nuTAN RPA, offers solutions that support our dedicated innovation to each company's success.
